PROJECTS

School Admission project with MERN stack

This website is designed and developed for any educational admission system. This website contains all information related to the institute. Candidates must register by filling the admission form and wait for the merit. He can also login through the given email. Because all information will be store in database.

Lenovo website replica project in react JS

This is my first complete website in react js. Which is inspired by the Lenovo website. In which we use cards to show product details. Also show the register data to another page.

Landing page for a freelancing website

This project is very beautiful, basically it is inspired by guru freelancing platform. It contains categories for different services and more.

PSD to HTML project

In which I have converted a figma design of a website into html. Which contain pages, cards and many more things. I also use bootstrap to achieve this goal.

Restaurant project in HTML/CSS/JS

The design of this website is static, and it contain food menu. Which also contain more categories in menu. Other portion is about the special offers. It also contains about us page. Which also contain some important components like Navbar, Footer etc. All code is handwritten.

CERTIFICATE
